Company Manager Website

Description:

Our group aims to make a website that streamlines a company's workflow.

Basic features:

- Messaging system (static/no use of sockets)

Administrators are given special permissions to:

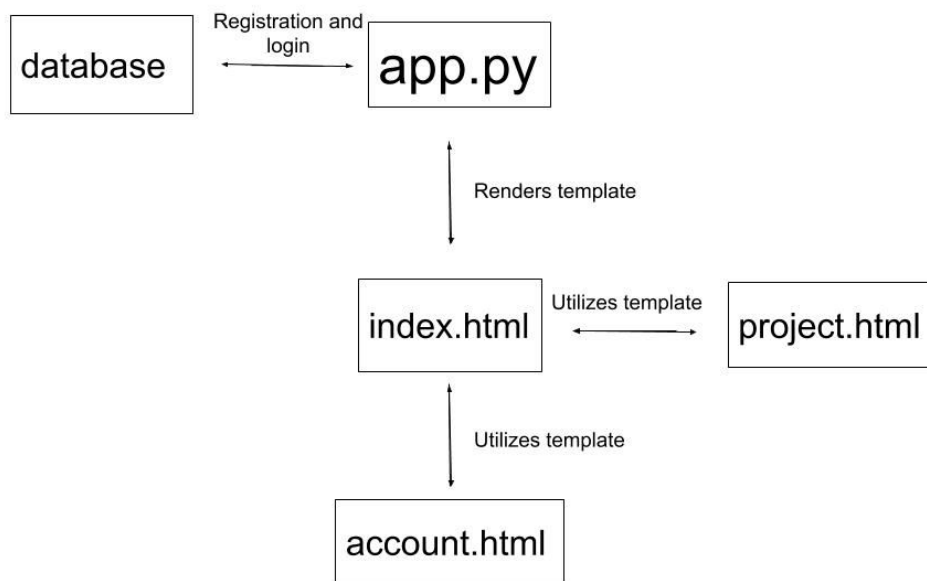

- Create a project
 - Assign tasks to workers
 - Set time for the project(displaying a timeline to demonstrate this)
 - Posting issues about project
- Manage worker info
 - Salary
 - Position
 - Hours
 - Grouping workers into teams
- Review system to rate worker's work ethic

Workers also have their own permissions:

- See designated timeline
- Assign sub-tasks
- Make suggestions
- Edit personal info
- Message others

For our front-end, we will be using Bootstrap because our group is more accustomed to this framework than Foundation.

Message:

Hi Mr. Employer,

My team has been working hard, but I think we need a break

Sincerely,
J.S.

Database Schema:

Task Breakdown:

Jack Lu- Works with Wei Wen on database features.

Matthew Ming- Works on templating and routing.
